

Kolab at the Desktop Summit

Get The Schedule And Announcements On Your Mobile

Kolab is the Groupware Solution for the Free Desktop with native clients for both KDE (Kontact) and GNOME (Evolution) as well as connectivity to Mozilla Thunderbird/Lightning. Additional clients are available for Linux mobile devices and the web. The Kolab Groupware Server combines well tested Free Software components such as Cyrus IMAP for content storage, OpenLDAP for user authentication, ClamAV and SpamAssassin for spam & virus filtering.

The organisers of the Desktop Summit, in co-operation with Kolab Systems AG, are providing a Kolab server from which you can sync the schedule and announcements from the organisers to your mobile devices. Any mobile device capable of ActiveSync will be able to do this.

How To Use The Kolab Server

Sync the conference schedule and messages to your mobile by using the following credentials with your ActiveSync (Exchange) client:

Server: demo.desktopsummit.org

Domain: desktopsummit.org

User: schedule@desktopsumit.org

Password: schedule

Some help for configuring your phone:

http://wiki.kolab.org/Z_push#Clients

This account has been deliberately locked down for security. You will not be able to send any mail and will not push any content to the server.

Schedule via iCal

The Kolab Server also provides the schedule of each room as an iCalendar stream for various applications. The URL for these streams is

<https://kolab.desktopsummit.org/ics/<room>.ics>

with <room> replaced by "Audimax" "Kinosaal" "Rm2002" "Rm3038" and for workshops "1.101" "1.308-3" (instead of 1.308/3) and so on.

Contact

Kolab Systems AG is a dedicated Free Software company providing services for the development, migration planning, deployment and operation of the Kolab Groupware Solution. If you are interested in what we do or would like to become part of our team, please seek us out during the Desktop Summit or contact us at
