

## Five Platforms. One Groupware.

The Kolab Groupware Solution offers flexible Personal Information Management (PIM) for professional deployments in companies of almost any size:

- One application on five platforms: The Kolab smart client based on KDE Kontact. Available for GNU/Linux, Windows, Mac OS X, Maemo/Meego and Windows Mobile. Supports a large variety of scenarios and devices from keyboard and mouse to touchscreen;
- Connect various mobile devices through ActiveSync: Android, Maemo/MeeGo, Symbian, iPhone, Windows Mobile and BlackBerry (via connector);
- Outlook on Windows through one of three different connectors;
- Web client based on Horde with many options for customization. Alternative clients possible;
- Highly modular and flexible, the Kolab Groupware Solution can be integrated into almost any existing infrastructure. The scalability advantages allow deployment also for very large numbers of users.

## Strengths and scenarios

Kolab is suitable for a wide variety of scenarios and organisations, in particular when

- Users shall be full productive even when offline, e.g. because some users find themselves on the road often, or a company is distributed over different locations, not all of which have a very good internet connection;
- Strategic aspects are very important, e.g. a company wants to migrate slowly, or it does not yet want to do without Microsoft and Outlook, but also does not want to depend on them for all time;
- Flexibility is required, e.g. a company wants to integrate groupware into an existing or new product in order to broaden its own offering;
- Security is relevant, e.g. a user seeks a fully auditable solution, or wants to make use of end-to-end encryption based on the current state of art;
- A lot shall be done with little hardware, e.g. when a company wants to keep using existing hardware, or seeks to obtain many advantages of a HA solution without much additional hardware.

## Contact

Kolab Systems AG with its parent companies KDAB and Intevation GmbH as well as the growing network of the Kolab Enterprise Community provides you with a strong partner for the development, migration planning, deployment and operation of the Kolab Groupware Solution.
